

VALDEZ COVID-19 SITUATION UPDATE

Valdez Unified Command
20 October 2020

DESCRIBE/UPDATE CURRENT SITUATION

State of Alaska Case Count (Updated 10/20)

New Resident Cases Yesterday 213 Updated Daily by Noon	Total Resident Cases 11,393 Cumulative (includes recovered cases)	Recovered Resident Cases 6,042 Statewide Total	Currently Hospitalized 38 Confirmed COVID Positive	Total Resident 67 Deaths Statewide
New Nonresident Cases Yesterday 2 Updated Daily by Noon	Total Nonresident Cases 1,039 Cumulative (includes recovered cases)	Active Cases 5,302	Total Hospitalizations 373 Cumulative (does not reflect current stays)	Total Nonresident 0 Deaths Statewide

Active State Mandates (Updated 10/15)

- Mandate 010: International & Interstate Travel
- Mandate 014: Non-Congregate Sheltering
- Mandate 015: Services by Health Care Providers
- Mandate 017: Independent Fishing Vessels
- Mandate 018: Intrastate Travel

Local Case Count

VALDEZ COVID-19 CASE COUNT					
Last updated 10.19.2020 @ 8:00 p.m.					
	CUMULATIVE CASES TO DATE	ACTIVE CASES	RECOVERED CASES	CUMULATIVE HOSPITALIZATIONS	DEATHS
VALDEZ RESIDENT	23	4	18	1*	1
NON-RESIDENT	28	0	28	1*	0

*Valdez case hospitalized in ANC.

NOTE: Valdez COVID-19 Case Count table is updated in real time.

There is often a data delay before our local cases are reflected on the DHSS Response Hub.

Active Valdez Health Mandates

- Mandate 003: Mask Mandate
- Active until October 21, 2020 unless rescinded/extended*

Trends: Current trend in active cases: up.  Since October 6, 2020, there have been 2,784 new cases (average of 198.9 new cases a day). Hospitalizations have risen to 411, up from 307 two weeks ago. During the last two weeks, Valdez has experienced its highest case count of 8 active cases and the first Covid-19 related death. Determining origin of index cases in contact investigations is growing more difficult. **Public health officials are concerned with the current cluster of local cases linked to private social activities and gatherings. This likely indicates additional related cases in the community not yet identified.**

Public Messaging Themes: Wearing cloth face coverings. Physical distancing. Hand/surface hygiene. Keep your bubble small. Avoid gatherings. Bolster resiliency. Importance of getting tested to slow spread. Understanding of contact tracing. Kindness, compassion, & mental health. Avoiding complacency.

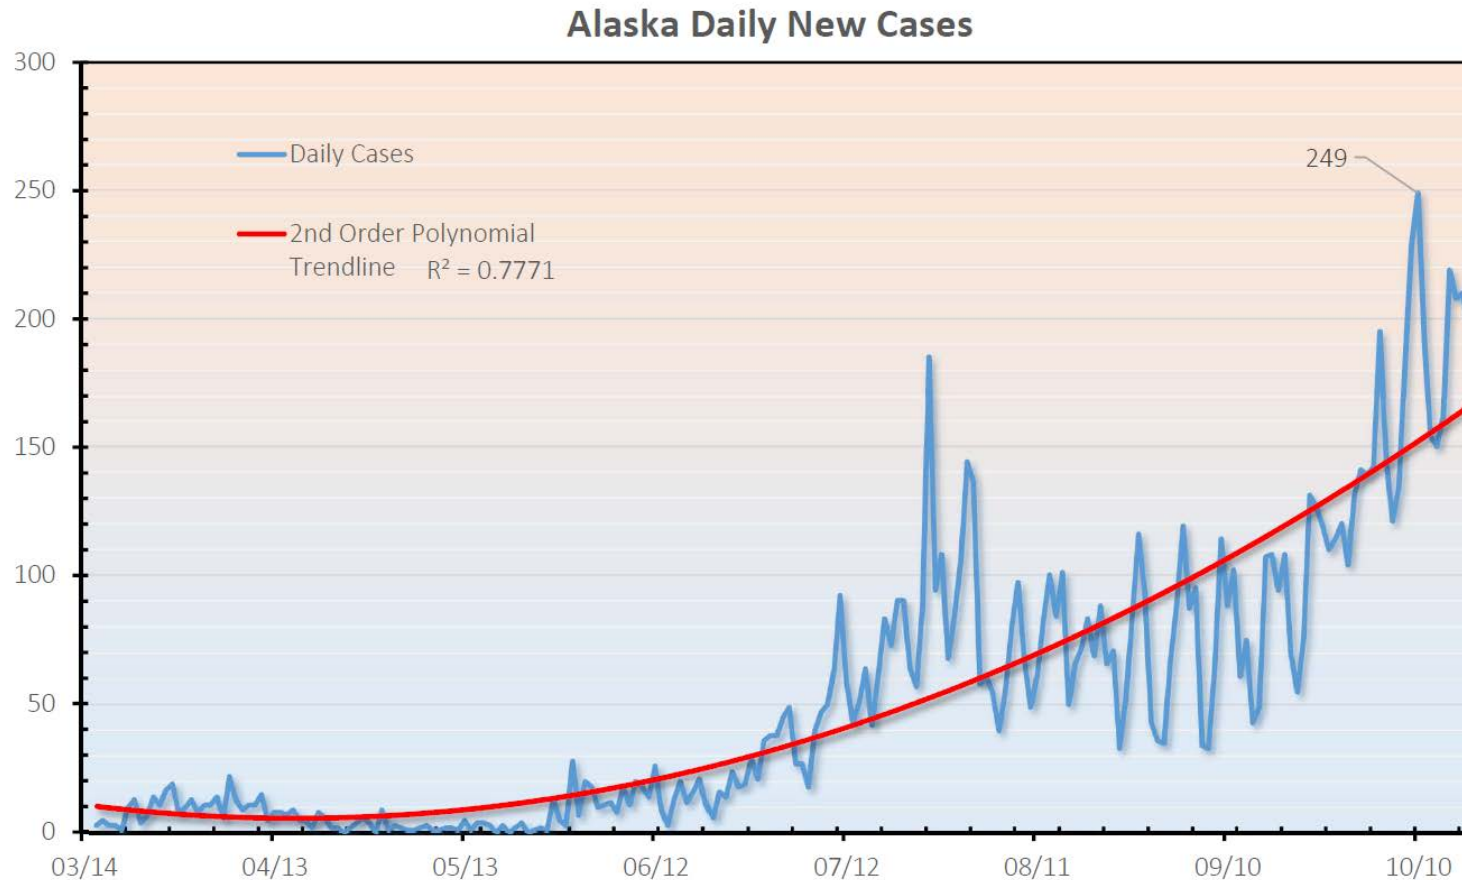

Community Areas of Concerns: (1) Active school year, (2) Economic impacts of COVID-19, (3) testing, (4) local mask mandate, & (5) impacts of state mandates.

UPDATE FROM ALASKA DHSS – OCTOBER 6, 2020

- COVID-19 cases are **continuing to rise** all across Alaska. The state's overall alert level continues to be **high and is trending up**.
- Statewide numbers are **at all-time highs** for the 14-day average case rate (26.0 cases per 100,000 population[10-18-20]) and percent positivity (4.67% for a 7-day rolling average [10-18-20]).
- DHSS urges urging Alaskans to exercise caution and **take the following steps to help prevent the spread** of COVID-19:
 - Do the 3 W's: Wear a mask, watch your distance and wash your hands.
 - Avoid the 3 C's: Crowded places, close contact settings and confined/enclosed spaces. Keep contacts limited and social circles small. Avoid indoor gatherings.
 - Don't ride in cars with people who are not in your household bubble.
 - Limit your errands/outings.
 - Watch out for COVID-19 symptoms. Get tested even if you have just one symptom or mild symptoms.
 - Don't be around others if you are not feeling well. Stay home and isolate immediately.
 - If you test positive, let close contacts know so they can protect others.
 - Quarantine quickly if you are exposed to COVID-19, for a full 14 days.
 - Consider getting tested 5-14 days after any possible exposure.
 - Protect our health care system – get your flu shot, wear a helmet, stay safe.

ALASKA NEW CASES GRAPH

Data taken from the State of Alaska Corona Virus Response Hub. Data Current as of 10-18-2020

Total Cases 11,182

ALASKA DEMOGRAPHICS

Alaska Demographic Distribution of Covid-19 Cases

Data taken from the State of Alaska Corona Virus Response Hub. Data Current as of 10-18-2020

Total Cases 11,182

ALASKA DEATHS

Alaska Death Rate as a Function Demographic Distribution

Data taken from the State of Alaska Corona Virus Response Hub. Data Current as of 10-18-2020

Total Cases: 11,182 Total Deaths: 67 Death Rate: 0.6%

PRESENT OBJECTIVES

IN ORDER OF PRIORITY ESTABLISHED 15 SEPTEMBER 2020

- **Objective 1:** Establish control measures to minimize spread of the virus (Mask mandate, etc.)
- **Objective 2:** Strengthen and monitor resiliency of essential services (Food Bank, public schools)
- **Objective 5:** Establish a reserve pool of health care workers (Alternate Care Site, Mass Testing TF)
- **Objective 9:** Coordinate support for community mental wellness
- **Objective 4:** Create a plan for staffing essential functions (ICS 213RR; messaging vacancies.)
- **Objective 8:** Create plans for addressing displaced persons and essential functions (MOUs /Alt Care Site/Testing POD)
- ~~**Objective 7:** Support Businesses & Summer Tourism task force (advise and inform)~~
- ~~**Objective 6:** Support Fisheries Task Force (ongoing coordination with commercial and recreational fishing)~~
- ~~**Objective 3:** Create a plan for the Valdez Patient 1 announcement (Complete.)~~

CURRENT OPERATIONAL EMPHASIS

- **Objectives 1 (Minimize Spread of Virus) and 5: (Medical Reserve Capacity)**
 - Track status of PVMC personnel needs, both current and projected.
 - Support alternate care site resourcing and staffing (Site/resources demobilized but on standby)
 - Support/resource Mass Testing Task Force, including local rapid testing capabilities
- **Objective 2: (Resilience of Essential Services)**
 - Monitor Food Bank surge in demand and facilitate as necessary to maintain continuity of operations.
 - Monitor Public Schools status and be prepared to assist in to maintain continuity of operations. In the event of a confirmed case associated with the schools, enact CONPLAN 2.D. to assist school district with the response.

COVID-19 MASS TESTING TASK FORCE

- **IMT facilitates coordination between agencies (Public Health, COV, Physician Offices, & PVMC)**
 - Authorizations
 - Supplies
 - Contracts
 - Personnel
- **COVID-19 testing available through three local medical facilities (PVMC, Alfa Doc, & VMC)**
 - Both symptomatic and asymptomatic testing available. Rapid testing available for select populations.
 - Working out bugs for larger scale testing if needed
 - Contingency planning for surge capacity (See CONPLAN 11a)
 - Traveler testing vouchers (accepted at PVMC) not adversely impacting consumption rates and staffing
- **Critical Information Requirement #11 and Contingency Plan 11a**
 - In case testing capacity is overwhelmed
 - Will allow us to connect to state resources
- **Current emphasis**
 - Three separate options for testing are active (More info: www.valdezak.gov/COVID-19)
 - Community-wide flu vaccination clinic planning (More info: www.valdezak.gov/FluShot)

WHEN WOULD THE UNIFIED COMMAND IMT RECOMMEND TO CITY COUNCIL TO TIGHTEN OR EASE LOCAL MANDATES?

DATA CONSIDERED

- Active State and Local Cases
- Origin Source of Infections
- Community Transmission
- Hospital Capacity
- Trends Over Time
- Testing Capacity & Utilization

DATA ANALYSIS TIMELINE

- Daily Monitoring by IMT Staff
- Weekly IMT Meetings
- Bi-Weekly IC Meetings
- Situation Updates to City Council

PHASES FOR RECOMMENDING TO TIGHTEN OR EASE MANDATES

PHASES	THRESHOLD CRITERIA	MEASURES TO CONSIDER FOR RECOMMENDATION
0	No sign of pandemic/epidemic level threat statewide.	None needed. Wash your hands.
1	COVID present in other Alaskan communities, but no outbreaks statewide. Zero local cases	Encourage hygiene, social distancing, and masking. Comply with state/federal directives.
2	Outbreaks in other Alaskan communities. No local cases or low number of cases which are contained.	Recommend mask mandate. Targeted testing. Start to consider capacity limits for high risk activities, gatherings, or businesses.
3	Increasing number of local cases with unknown origin. Increasing number of local close contacts for cases outside Valdez.	Recommend mandate for limiting capacity of high risk activities, gatherings, and businesses. Targeted testing, to include close contacts.
4	Active local spread. Multiple unknown origin cases. Health care system still safely in operating limits	Recommend mandate for additional capacity limitations of high risk activities, gatherings, and businesses. Expanded targeted testing.
5	Local cases meet or exceed hospital capacity (2+ COVID-19 patients). Ability to transfer patients limited.	Recommend mandated closure of businesses, hunker down, regulate travel, activate alternate care site, & request state assistance.

CONSIDERATIONS FOR EASING MANDATES

Active cases and community transmission levels fall and then remain below the threshold for the current level for 14 days. If not, restart the 14 day clock.

During the 14 day time period, trends must remain generally downward and conclude on a downward trend. If the trend reverses upward at the end of the 14 day period, re-evaluate in 3 days to ensure the general trend remains downward.

General downward trend does not have to be constantly downward. Some minor fluctuations on the way down are to be expected.

PLAN FOR ESCALATING & DE-ESCALATING MANDATES

- IMT has a draft plan for guiding recommendations.
- Conditions-based criteria for escalating/de-escalating mandates, with time-based criteria for reviewing conditions.
- Will consider both current cases and upward/downward trends in cases.
- Will consider impact on local healthcare system capacity.
- Will address when (under what conditions) IMT considers making recommendations. City Council decides what to implement regarding mandates.

CIRs AND CONTINGENCY PLANNING

Critical Information Requirements

(Information that drives a decision)

1. New Federal/State Directives
- ~~2. First confirmed local case of COVID-19~~
 - 2.1 Any confirmed Valdez Case
3. First confirmed community transmission
- ~~4. Incident-related death~~
 - 4.1 Any Covid-19 Related Death
 1. Medical facilities 2-4+ COVID-19 patients
 2. Critical shortage of mission essential resource (≤ 1 resupply cycle remaining)
 3. Critical personnel shortage (< mission capable)
 4. Disruption of supply chain
 5. Occurrence of another emergency
 6. Multiple unrelated COVID-19 cases
 7. Testing Capacity overwhelmed or displaced

Each CIR links to a contingency plan

The CIR is a triggering event that will activate its associated contingency plan.

Allows pre-planning of actions, personnel, and resources for quick deployment when the event occurs.

Plans are intentionally flexible to facilitate adaptation to changing conditions.

Details thought out before the situation is urgent

Example: CIR #5 Occurs

Execute CONPLAN 5a

Activate Alternate Care Site

Inform State EOC

Increase resupply of consumables

Oxygen

PPE

Cleaning Supplies

Notify First Responders
